

iRewards

The Smart Table Storefront That Brings Customers Back

Product Flow & Business Proposal

Target Market: Independent Cafes & F&B Merchants — Malaysia & Singapore

September 2026

Executive Summary

iRewards is a multi-tenant B2B SaaS platform that gives every table its own **intelligent mobile storefront** — plus an automated WhatsApp engine that brings customers back.

Customers scan a table QR and land in the **iRewards storefront** instantly — no app, no signup, no OTP. They order, pay via **DuitNow / TNG / SGQR**, and benefit from smart upselling and downselling in-app.

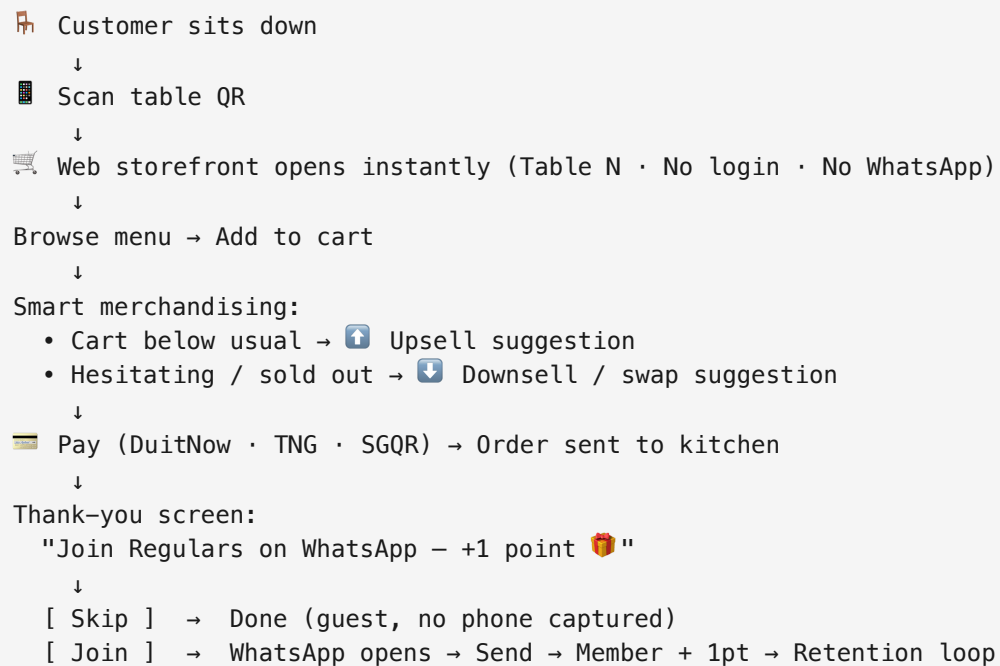

Rewards are optional. After payment, diners may join the merchant's Regulars club on WhatsApp (+1 point). Members receive automated bounce-back vouchers, review nudges, and churn win-back messages.

Merchants keep their existing POS. iRewards is the table storefront and retention engine. Customer data belongs to the merchant. **RM199 / SGD 80 per month**. No transaction commission.

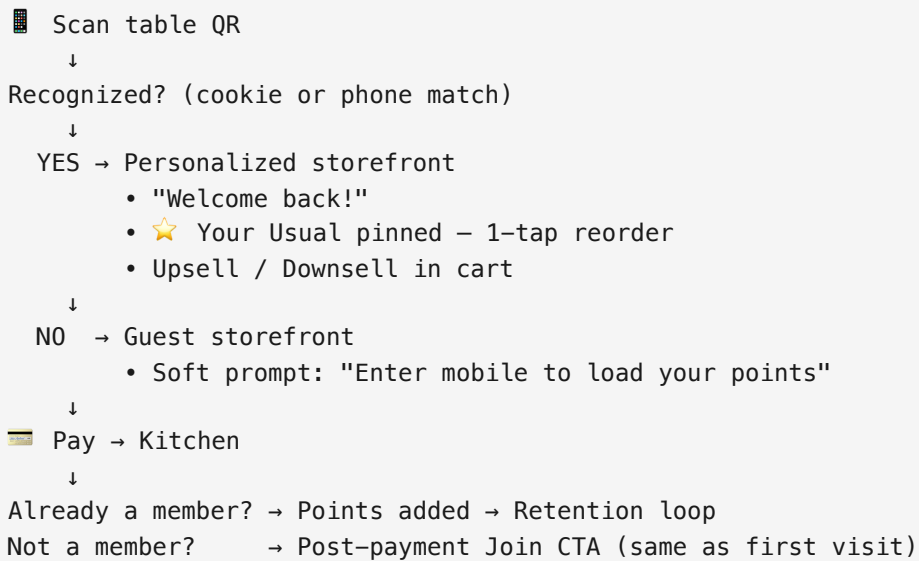

Product Flow — Co-Founder Approved

Menu-first for ordering. WhatsApp for identity and retention after payment.

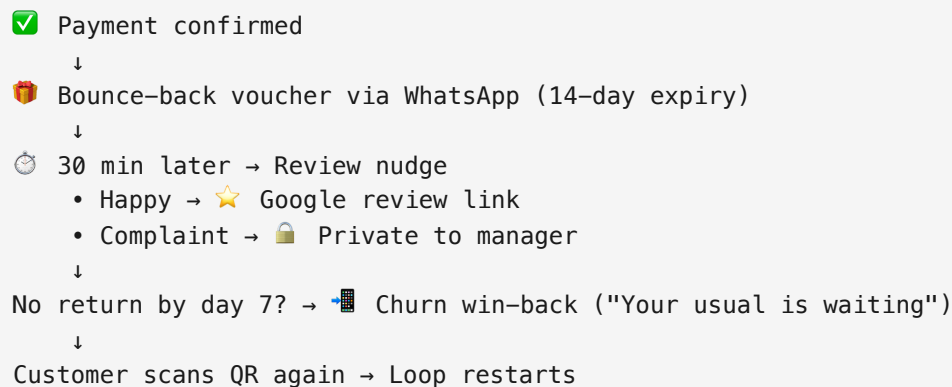

Flow 1: First-Time Visitor

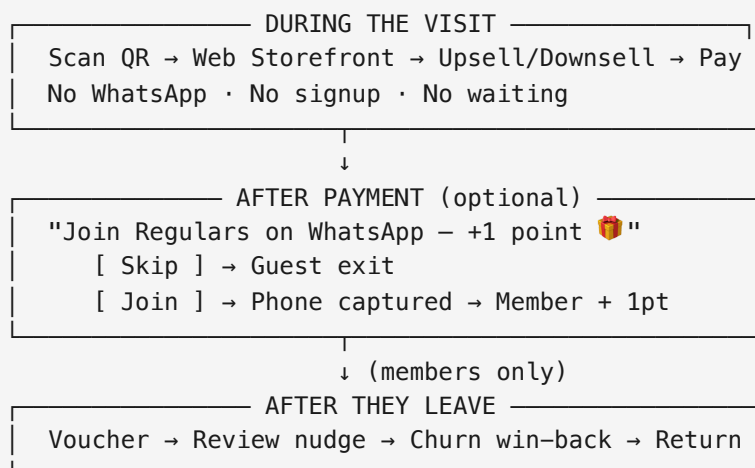

Flow 2: Return Visitor

Flow 3: Post-Visit Retention Loop (Members Only)

Full Journey (One View)

WhatsApp Message Copy

After Payment — On-Screen CTA

Join [Cafe] Regulars on WhatsApp

🎁 +1 point on your first join

[Join on WhatsApp] [Maybe later]

After They Tap Join

Welcome to [Cafe] Regulars! 🎉

+1 point added — you have 1 point.

See you next time! We'll send you member deals here on WhatsApp.

Reply STOP anytime.

Return Member — After Scan

Welcome back! 🙌 Table 5

You have 12 points.

Flow Rules

Rule	Why
Menu opens on scan — always	Hungry people first
WhatsApp only after payment	Earn the right to ask
Join is optional — always	No angry diners
Upsell/downsell in storefront	Product owns the sale

Retention on WhatsApp	Product owns the comeback
Counter ordering still works	Physical escape hatch

The iRewards Infinite Cash Loop

1. **Scan → Storefront → Order** — Instant web menu. Returning members see "Your Usual." Upsell/downsell in real time.
2. **Pay → Optional Join** — DuitNow/TNG/SGQR checkout. Post-payment WhatsApp join (+1 point). Guests who skip simply leave.
3. **Reputation Booster** — 30 min after payment, members get a WhatsApp review nudge. Happy → Google link. Complaints → private.
4. **Retention Lock** — Bounce-back voucher on checkout. 14-day expiry. Churn win-back if they don't return. Loop restarts on next scan.

Core Capabilities

- **iRewards Storefront** — QR per table (?table=N). Full ordering channel.
- **Intelligent Upselling** — Add-on suggestions when basket has room to grow.
- **Intelligent Downselling** — Right-fit alternatives when customer hesitates or item is sold out.
- **Optional WhatsApp Rewards** — Post-payment opt-in. Phone = loyalty ID.
- **"Your Usual" for Regulars** — Favorite order pinned, one-tap reorder.
- **Local Cashless Payments** — DuitNow / TNG / SGQR. Orders to kitchen via WebSockets.
- **Automated Post-Visit Engine** — Vouchers, reviews, churn win-back on WhatsApp.

Core Problem

- **Labor shortage** — Short-staffed teams, slow checkout, missed second orders.
- **Uncaptured revenue** — RM1,500–4,000/month per shop in lost add-on sales.
- **30% aggregator trap** — Delivery platforms drain dine-in margins.
- **Generic QR menus fail** — PDFs, OTP walls, high abandonment, no retention.

Business Model

- **Pricing:** RM199 / SGD 80 per outlet per month (flat, no transaction fee)
- **Positioning:** Table storefront overlay — does not replace counter POS
- **Data:** Customer data belongs to the merchant; iRewards is the processor

48-Hour Weekend Pilot

Scope: All tables live at beachhead cafe. Manual backend (founders on floor). No production servers yet.

Metrics to Track

Metric	Target
Scan → order completed	≥ 50%
AOV vs last weekend	+ 10%
WA join after payment	≥ 20%
Voucher redeemed in 14 days	≥ 1 (proves loop)
Counter bail-outs	< 20%

Pilot Setup

- Print QR stand per table (?table=N)
- Google Sheet: table #, order value, WA join Y/N, second order Y/N
- Pre-written WhatsApp quick replies for joiners
- Static DuitNow QR for manual payment (acceptable for pilot)
- Table tent copy: *"Scan to order · Join for points after you pay"*

Optional A/B Test

Tables	Flow
1–3	Menu-first (recommended)
4–6	WhatsApp-first (compare)

Measure: scan→order %, AOV, WA join rate, counter bail-outs. Let data pick the winner.

Competitive Positioning

Competitor	They win on	iRewards wins on
MenuBase	Meal-time upsell, cheap QR ordering	Post-visit WhatsApp retention loop
StoreHub	Full POS, scale	Table overlay + WA retention without switching POS
FOODSERVA	Full restaurant stack	Lightweight overlay, no rip-and-replace
App360 / RateUp	WhatsApp loyalty CRM	Storefront ordering + loyalty in one system
